DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 29-38, 41-44, 48-55, and 58-61 are rejected under 35 U.S.C. 103(a) as being unpatentable over Silverbrook et al (US Pat 6290349) in view of Frechtman (US Pat 3990670).

Silverbrook et al discloses:

• {claim 29} A media processing device (figure 2); a media processing engine having a media input along a first face of the engine and an output along a second face of the engine (figure 2, reference 706)

Art Unit: 2853

• {claim 30} the first face and the second face are opposite one another (figure 2, reference 706)

Page 3

- {claim 31} wherein the engine, when vertically oriented, has a height, a width and a depth, wherein the first face and the second face each define the width and the depth of the engine and wherein the depth is smaller than the height and the width (figures 1-2)
- {claim 32} the engine has a straight-through media path (figure 2; column 3, lines 56-60)
- {claim 33} the media input is configured to receive media while the media is in a vertical orientation (figure 2, reference 604; column 3, lines 56-60)
- {claim 34} the media output is configured to discharge media while the media is in a vertical orientation (figure 2, reference 619; column 3, lines 56-60)
- {claim 35} the media output is configured to discharge media while the media is in a vertical direction (figure 2, reference 619; column 3, lines 56-60)
- {claim 44} the media input comprises an external slot configured to enable individual sheets of media to be manually fed into the slot (figure 2, reference 604; column 3, lines 56-60)
- {claim 48} a media receiver proximate the media output (figure 2, reference 619)
- {claim 50} the receiver receives media from the media output while the media is in a substantially vertical orientation and holds the media in a substantially vertical orientation (figure 2, reference 619)

Art Unit: 2853

• {claim 52} the receiver is configured to support the media such that at least a portion of the media extends beyond a front of the print engine opposite the

Page 4

vertical surface (figure 2)

• {claim 54} the media processing engine is configured to print upon the media (column 1, line 65-column 2, line 32)

- {claim 55} the media input is configured to receive an individual sheet of media from a stack of media proximate the input (figure 2, reference 604)
- {claim 58} A media processing device (figure 2); a media processing engine having a media input along a first face of the engine and an output along a second face of the engine (figure 2, reference 706)
- {claim 59} A method for processing media (figure 2); feeding media into a media input of the engine while the media is substantially vertical; printing upon the media; and discharging the printed upon media out a media output of the engine while the media is in the substantially vertical orientation (figure 2; column 3, lines 53-65)
- {claim 60} positioning a stack of individual sheets of media proximate to the media input (figure 2, reference 604)
- {claim 61} holding the ejected media below the media output (figure 2, reference 619)

Silverbrook et al differs from the claimed invention in that it does not disclose:

• {claim 29} a media processing device for use with a structure having a first vertical surface with an upper most extremity; a support coupled to the engine

and configured to couple the engine to the structure such that the media output is below the uppermost extremity of the first vertical surface

- {claim 36} the support is configured to couple the engine to the surface such that the media input is below the uppermost extremity of the first vertical surface
- {claim 37} the structure has a top along the uppermost extremity of the vertical surface and wherein the support extends opposite the top
- {claim 38} the support extends opposite the first vertical surface
- {claim 41} the support is movable between a first position in which the support couples the engine to the structure along the first vertical surface and a second position in which the support rests upon a horizontal surface while inclinating at least a portion of the engine above the horizontal surface
- {claim 42} wherein the support is moveable between a first position in which a
 majority of the support extends beyond the media input and a second position in
 which the majority of the support extends between the media input and the media
 output
- {claim 43} the support pivots between the first position and the second position
- {claim 49} the media receiver pivots between a first position in which the receiver hangs below the media output and a second position in which the receiver is adapted to rest upon a horizontal surface
- {claim 51} the receiver is configured to support the media in a tilted orientation
 directed away from the vertical surface
- {claim 53} the support is pivotably coupled to the engine

Art Unit: 2853

- {claim 58} a media processing device for use with a vertical surface; means for supporting the engine relative to the vertical surface such that the media output is below an uppermost extremity of the vertical surface
- {claim 59} supporting a media processing engine along a vertical surface Frechtman discloses:
 - {claim 29} a pivotable support that is convertible between a hanging mode and a standing mode (figure 1; abstract; column 2, lines 34-43)

- {claim 43} the support pivots between the first position and the second position (abstract; column 2, lines 34-43)
- {claim 58} means for supporting (figure 1; abstract; column 2, lines 34-43)

It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the teachings of Frechtman into the invention of Silverbrook et al. The motivation for the skilled artisan in doing so is to gain the benefit of providing a synamic support that can both hang an object and stand it up (abstract). The combination naturally suggests:

• {claim 29} a media processing device for use with a structure having a first vertical surface with an upper most extremity; a support coupled to the engine

Application/Control Number: 10/086,908 Page 7

Art Unit: 2853

and configured to couple the engine to the structure such that the media output is below the uppermost extremity of the first vertical surface

- {claim 36} the support is configured to couple the engine to the surface such that the media input is below the uppermost extremity of the first vertical surface
- {claim 37} the structure has a top along the uppermost extremity of the vertical surface and wherein the support extends opposite the top (depending on where mounting takes place)
- {claim 38} the support extends opposite the first vertical surface
- {claim 41} the support is movable between a first position in which the support couples the engine to the structure along the first vertical surface and a second position in which the support rests upon a horizontal surface while inclinating at least a portion of the engine above the horizontal surface
- {claim 42} wherein the support is moveable between a first position in which a
 majority of the support extends beyond the media input and a second position in
 which the majority of the support extends between the media input and the media
 output
- {claim 49} the media receiver pivots between a first position in which the receiver hangs below the media output and a second position in which the receiver is adapted to rest upon a horizontal surface
- {claim 51} the receiver is configured to support the media in a tilted orientation directed away from the vertical surface
- {claim 53} the support is pivotably coupled to the engine

Art Unit: 2853

- {claim 58} a media processing device for use with a vertical surface; means for supporting the engine relative to the vertical surface such that the media output is below an uppermost extremity of the vertical surface
- {claim 59} supporting a media processing engine along a vertical surface

Claims 39-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Silverbrook et al (US Pat 6290349) in view of Frechtman (US Pat 3990670), as applied to claims 29-38, 41-44, 48-55, and 58-61, and further in view of Marshall, Jr. (US Pat 4074872).

Silverbrook, as modified, teaches all limitations of the claimed invention except for the following: the structure has a second vertical surface opposite the first vertical surface, wherein the top extends between the first vertical surface and the second vertical surface and wherein the support wraps around the structure to extends opposite the second vertical surface.

Marshall, Jr. discloses a structure with a second vertical surface opposite a first vertical surface, wherein a top extends between the first vertical surface and the second vertical surface and wherein a u-shaped support wraps around the structure to extends opposite the second vertical surface (figure 1, 4, reference 25-26).

Art Unit: 2853

It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the teachings of Marshall, Jr. into the invention of modified Silverbrook. The motivation for the skilled artisan in doing so is to gain the benefit of avoiding putting unsightly nail marks into a vertical structure in order to vertically mound the media processing device.

Claims 45-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Silverbrook et al (US Pat 6290349) in view of Frechtman (US Pat 3990670), as applied to claims 29-38, 41-44, 48-55, and 58-61, and further in view of Khormaee (US Pat 5397192).

Silverbrook et al discloses, with respect to claim 46, wherein the engine, when vertically oriented, has a height, width, and depth and wherein the depth is smaller than the height and width (figures 1-2).

Art Unit: 2853

Silverbrook et al, as modified, differs from the claimed invention in that it does not disclose the media input is configured to receive media having a width of at least 8 inches.

Khormaee discloses "Printers are often called upon to print on a wide variety of recording media having different widths and printing surfaces. Common recording media include standard 8.5X11 inch paper..." (column 1, lines 53-57).

In light of this teaching, it would have been obvious to one having ordinary skill in the art at the time the invention was made to in corporate the teachings of Khormaee into the invention of modified Silverbrook et al so that the media input can be configured to receive media having a width of at least 8 inches. The motivation for the skilled artisan in doing so is to gain the benefit of increasing printer versatility; the benefits of printing on media such as standard 8.5X11 inch paper are well known to one of ordinary skill in the art.

Claim 47 is rejected under 35 U.S.C. 103(a) as being unpatentable over Silverbrook et al (US Pat 6290349) in view of Frechtman (US Pat 3990670), as applied to claims 29-38, 41-44, 48-55, and 58-61, and further in view of Kikuchi (US Pat 5929894).

Silverbrook et al, as modified, teaches all limitations of the claimed invention except for the following: the engine includes a photoconductive drum.

Kikuchi discloses a photoconductive drum.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to replace the printing system disclosed by Silverbrook et al with the printing system disclosed by Kikuchi. The motivation for the skilled artisan in doing so is to gain the benefit of effecting faster print speeds.

Art Unit: 2853

Claims 56-57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frechtman (US Pat 3990670) in view of Silverbrook et al (US Pat 6290349).

Frechtman discloses:

• {claim 56} A support for use with a wall and a horizontal surface, the support comprising: a U-shaped portion adapted to be movably coupled to a device so as to move between a first position in which the U-shaped portion receives a top of the wall and a second position in which the portion rests upon the horizontal surface (figure 1; abstract; column 2, lines 34-43; depending on where mounting takes place)

Page 11

• {claim 57} the portion pivots about an axis parallel to the wall between the first position and the second position (figure 1)

Frechtman differs from the claimed invention in that it does not disclose a support for use with a media processing engine.

Silverbrook et al discloses a media processing engine (figure 2).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the teachings of Silverbrook et al into the invention of Frechtman. The motivation for the skilled artisan in doing so is to gain the benefit of being able to hang a device, which is able to execute vertical printing; the benefits of printing are well known to one of ordinary skill in the art.

Conclusion

Application/Control Number: 10/086,908 Page 12

Art Unit: 2853

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Matthews (US Pat 4909466) discloses a Christmas ornament hook.

Stith (US Pat 5527006) discloses a seasonal ornament holder.

Wang (US PgPub 20020179793) discloses a device with retractable hook for hanging a stocking.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leonard S Liang whose telephone number is (703) 305-4754. The examiner can normally be reached on 8:30-5 Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Meier can be reached on (703) 308-4896. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
